

**MANUFACTURER'S DECLARATION****of Compliance with Requirements on Admissible Radioactivity  
of Steel Products**

The manufacturer NOVÁ HUŤ s.r.o. declares that the supplied steel product<sup>1</sup> meets the requirements of Directive 2013/59/EUROATOM and the regulations of the Czech Republic on protection against ionizing radiation.

Based on control measures, i.e. measurement of radioactivity of input semi-finished products, we declare that the steel products do not contain any added or residual radionuclides above the permissible level and do not pose a risk of increased radiation dose for workers or the public.

For steel products the radiological level is below the regular effective dose limit for the general public, which is 1 mSv per year. It is also below the global mean effective dose calculated by UNSCEAR<sup>2</sup> for ionizing radiation emitted by natural sources (soil, cosmic rays, etc.), which is set at 2.4 mSv per year.
